Sponsoring Organization:

City of Paris

Supporting Organization(s):

Objective:

The ecological and social transition dashboard aims to offer transparency and visualization of main environmental and social data. Thanks to the figures and explanations given, citizens will better understand the policies implemented by the City of Paris over the last decade.

Description:

The City of Paris aims to share and explain main data on Parisian environmental and social policies with citizens.

The city is committed, with this dashboard, to providing reliable data in order to allow citizens to better understand the policies implemented by giving a clear definition of the indicators and explaining their trends. The data selected refers to climate change, social issues, citizen participation, quality of the environment, biodiversity, sustainable consumption & production. Each piece of data is provided by an expert and is subject to a reliability and documentation strategy before its publication in the Parisian Open Data.

Main intended outcome: give keys to understanding and evaluating the impact of environmental and social policies on Paris’ city.

Monitoring and evaluation progress: publishing more and more reliable data each year.
